

**COMMUNICATIONS ACCESSORY AND COMPUTING UNIT
THAT OPERATES THEREWITH**

5

ABSTRACT OF THE DISCLOSURE

An accessory for transmitting signals, includes a receptacle that accepts signals of a first format from a computing unit. The accessory also includes a converter, coupled to the receptacle, which converts the signals of a first format to signals of a second format. The accessory also includes an aperture, coupled to the converter, which transmits the signals of the second format. The aperture is also coupled to a resilient element that extends the accessory from a compressed state, wherein the extension influences transmission of the signals of a second format. The accessory may also receive signals as well.
